

# Sohel Mozid Rahman

## Software Engineer

New York, USA

www.srahman.io

sohelm.rahman97@gmail.com

www.github.com/srahman-057

**Summary:** Tech enthusiast with a passion for full-stack web development, cloud engineering and DevOps. Experienced in building fast, scalable applications that operate in a variety of web or desktop settings.

## Technologies and Languages

- Languages: Python, C, C++, C#, Java, Javascript, HTML
- Frameworks: ReactJS, NodeJS, ExpressJS, NextJS, Tailwind CSS, Bootstrap, Django, Laravel
- Technologies: Nginx, Gunicorn, Pandas, Pygame, Bash Scripting, Git, Unity Engine
- Databases: MySQL, PostgreSQL, SQLite
- Cloud: AWS, Azure, GCP
- Operating Systems: Windows OS, Linux OS (Mint and Ubuntu)

## Experience

**Barneel Inc.** | New York, New York

*Founding engineer*

(Jan 2025 - July 2025)

- Build a web application from scratch using Django, TypeScript and PostgreSQL.
- Switch the firm's web hosting to AWS and implement Elastic Load Balancing in order to improve scalability.
- Utilize Amazon CloudFront CDN to enable reliable access for a multinational user base located in Bangladesh, India and USA.

*Web Development Intern*

(Oct 2024 - Jan 2025)

- Improved familiarity with JIRA ticketing system and agile methodology.
- Learned about online payment gateways and how to implement them in a business setting.
- Learned about Django, React, Node JS, Tailwind CSS and Typescript.

**Turtle Solutions Ltd.** | Dhaka, Bangladesh

(Dec 2019 - Dec 2021)

*Software engineer*

- Utilized Bootstrap and jQuery for working with company website's frontend.
- Spearheaded development of the website's backend from pure PHP to Laravel.
- Migrated website's MySQL database to PostgreSQL, leading to improved reliability and scalability.
- Involved in ERP software development for a number of clients.
- Received hands-on experience regarding efficient workflow in a professional setting.

## Projects

- **ptch-blog:**

Full stack web application that offers efficient blog management

- o Modular React components that can be used to deploy dynamically sized storycards at will.
- o ExpressJS backend handles API routing intuitively.
- o Optimized production build using Vite.

- o Vercel used to trigger automatic deployments based on Github repository updates.
- o CORS (Cross-Origin Resource Sharing) to prevent unauthorized API access.
- o Arcjet utilized for bot detection, rate-limiting and other security features.

*Technology used:* NodeJS, ExpressJS, ReactJS, PostgreSQL, Vite

- **genetic-arcade:**

Python based project that showcases the power of genetic algorithms in a variety of visual environments.

- o Built machine learning models that used unsupervised learning to solve diverse problem sets in a changing visual environment.
- o Effectively designed code implementing a genetic algorithm (NeuroEvolution of Augmenting Topologies - NEAT) to tackle evolving problem sets.
- o Implemented Git version control to effectively document various stages of the project development and keep track of evolving features in the codebase.

*Technology used:* python, pygame, python-neat, matplotlib

- **retro\_site:**

Web project that aims to recreate a nostalgic UI look and feel by drawing inspiration from retro operating systems such as Windows 95 and 98.

- o Designed the UI/UX to be accessible from any viewport size (mobile, tablet, desktop, etc)
- o Meticulously tested the site to ensure fluid transitions between different viewpoint sizes upon window resizing.
- o Optimized the project to minimize AWS storage and bandwidth resource usage and stay within desired quotas.
- o Deployed on AWS S3 and utilized a custom domain to make the project easily accessible to the public.
- o Implemented a client-side scripting only model in order to further reduce usage of AWS resource quotas.
- o Debugged any issue that appeared throughout the development process that interfered with application functionality and efficiency.

*Technology used:* HTML, CSS, Javascript, Tailwind CSS, AWS S3 bucket

- **pdf\_extractor:**

simple python program that extracts specific data from a table in a pdf file.

- o Introduced bash scripting to automate data extraction and organization.
- o Included dummy files with mock data to demonstrate usage principles.
- o Extensively documented methods to customize the program in order to fit individual scenarios.

*Technology used:* tabula, pandas, numpy, bash scripting

## Education and Certifications

---

- **Master of Science (M.S.) in Computer Science**, The City College of New York (2022–2024)
- **Bachelor of Science (B.S.) in Computer Science and Engineering**, North South University. (2016–2021)

## Achievements

---

- Full Tuition Waiver Scholarship, North South University, 2016
- Kennedy-Lugar Youth Exchange and Study scholarship, Forest Hills High School, New York, 2014

## Languages

---

- English (Completely fluent)
- Bengali (Native)

- Hindi (Conversational)
